

We want to use  
the most sustainable  
buckets for packaging  
and protection.

# Packaging

the better bucket.

# Packaging that protects and preserves.

We are **groku Kunststoffe GmbH**, a third-generation owner-operated business based in Schloß Holte-Stukenbrock.

As one of Europe's largest fully automated manufacturers of plastic buckets, we place great importance on our own performance. The satisfaction of our customers and made-to-measure product solutions are our top priorities. Our actions and activities are based on four core values:

They form the basis of our success and drive us to consistently expand the use of recycled materials in collaboration with our customers and to produce in an energy-efficient and climate-friendly manner.

We are passionate about offering sophisticated and individual product innovations, scalable capacities and honest sustainability efforts.

With our values, we are shaping a sustainable and promising future.

Sustainability

Customer centricity

Energy

Quality

## Our promise: **the better bucket.**

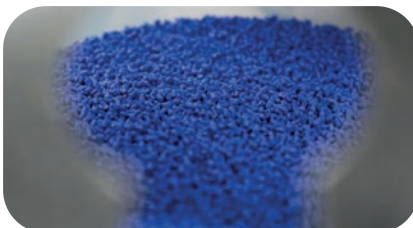

**The better bucket** is more than just a bucket. It is our promise to our customers! We develop packaging solutions of the highest

quality, functionality and sustainability. Always individually tailored and always a step above conventional buckets.

## What exactly does **the better bucket** mean?

### Sustainably better

Our groku buckets are more sustainable than conventional buckets – thanks to their high recyclability, resource-saving production and high recycled content.

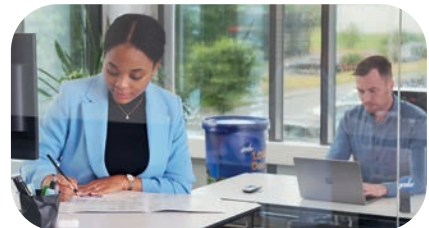

### Higher quality

'Better' stands for higher quality and performance: groku buckets are durable, stable, leak-proof and hygienic – yet lightweight and highly protective.

### Better positioned

With **the better bucket**, groku clearly stands out, creates a unique identity and gains the trust of environmentally conscious customers.

For us, **sustainability**  
is more than just a goal.

At groku, we are actively committed to sustainable solutions. Our goal is to develop resource-saving and sustainable packaging buckets that meet the highest quality standards while minimising environmental impact.

## Our groku green values

### 7 values, 1 strategy

Our groku green values define how we think and act. There are seven values that unite our most important sustainability issues. They form our holistic

sustainability strategy, which we use to turn the vision of **the better bucket** into reality.

Our buckets combine sustainability, quality and responsibility. They are mainly made from recyclable monomaterial, can be reused multiple times and have already been produced over

30 million times from post-consumer recycled material. With REDcert<sup>2</sup>-certified materials, we are demonstrably saving CO<sub>2</sub> and pursuing a clear goal: to reduce our emissions by at least 40% by 2030.

**Our packaging buckets**

- ✓ have a capacity of 1 to 32 litres
- ✓ are available in standard white, transparent or customised colours based on pantone or RAL specifications
- ✓ are decorated using an in-mould labelling (IML) process – for highly expressive designs
- ✓ are available with metal and plastic handles
- ✓ are mono-material packaging
- ✓ are recyclable packaging
